DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1 to 7 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 to 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent (JP) 362124218 or JP363171857 or JP401246343.
4. The English abstract of JP'218, JP'857 and JP'343, each teach a martensitic steel alloy having a composition with constituents whose wt% ranges overlap or closely approximate those recited by claims 1 to 7; such similarities in wt% ranges establishes a prima facie case of obviousness, see MPEP 2144.05.
5. Even though prior art alloys do not teach a metal used as a filler in welding steel as recited by the claims, such would not be a patentable difference since it is merely applicant's future and intended use. Note claims are directed to a metal alloy composition per se. Also the weld test pad containing martensite microstructure as recited by the claim is merely a future property which occurs after welding .

Allowable Subject Matter

6. Claims 8 to 10, 12 to 25 and 27 are allowed.

7. The following is an examiner's statement of reasons for allowance: The art of record does not teach or fairly suggest a welded article and its method of making, as claimed, comprising the steps of attaching together two components by placing a filler metal alloy having a composition containing 1 to 1.5% Ti between a first and second component, and welding the filler metal to form a weld comprising an amount of martensite sufficient to increase the volume of the weld thereby at least partially offsetting shrinkage to the weld upon cooling.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 1742

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
